

SMX2R universal radio receiver, 2 channels, 433.92MHz.

Universal 2-channel radio receiver, 433.92 MHz, memory for 256 remote controls, Flor series.

The task of the receiver is to convert the information contained in radio waves into electrical voltage. Thanks to this, we achieve the effect of automatically opening our device after pressing the appropriate button on the remote control. The radio receiver is a device that guarantees the correct and efficient functioning of the entire set.

This receiver can be connected to drives of other brands if we want them to be operated with Flor remote controls.
