

# ROX1000 - drive for sliding gates

## **ROX1000 drive for sliding gates weighing up to 1000 kg**

Drive for sliding gates weighing up to 1000 kg with a built-in control unit, intended for private use. The new family of drives offers a travel speed of 0.18 m/s. They are characterized by ease of installation, aesthetic design, excellent parameters and reliability. Strong, durable aluminum body ensures many years of use.

### **The most important features of the ROX1000 Drive:**

- 230V motor
- equipped with a mechanical system that allows the gate to be opened and closed manually in the event of a power failure or improper functioning of the gate
- possibility of adjusting working time, break time and strength
- self-locking drive, which means that the gate locks mechanically when the engine stops. Thanks to this, there is no need for additional mechanical locking of the gate using a lock, nor is it possible to open it manually.
- smooth release during closing and soft start function - it involves changing the speed in such a way as to avoid a strong jerk when opening or closing the gate. Thanks to this, the gate operates smoothly and does not make noise during operation.
- possibility of connecting photocells and a signal lamp, increasing the safety of gate operation
