

THOR 1500 - drive for sliding Gate

THOR 1500 drive for sliding gates weighing up to 1,500 kg

Drive for sliding gates weighing up to 1500 kg, 230V, with a built-in control panel. Easy installation, aesthetic design, excellent parameters and reliability.

The most important advantages of the Thor1500 model:

- cooled engine for increased work intensity
- built-in electronics with removable plugs
- self-locking drive, which means that the gate locks mechanically when the engine stops. Thanks to this, there is no need for additional mechanical locking of the gate using a lock, nor is it possible to open it manually.
- equipped with a mechanical system that allows the gate to be opened and closed manually in the event of a power failure or improper functioning of the gate
- smooth release during closing and soft start function - reduces the speed to avoid a strong jerk when opening or closing the gate. Thanks to this, the gate operates smoothly and does not make noise during operation.
- an electronic brake that reduces the inertia of the leaf after the end of movement
