

WINGO4000 - set for swing gates

Electromechanical actuators for double-leaf gates with a leaf length of up to 2.0 m and a weight of up to 200 kg.

Built-in capacitor.

Convenient emergency unlocking mechanism in the event of a power failure.

Safe:

- phototest - automatic check of the correct operation of photocells before each gate movement.

Convenient: partial gate opening function (gate function).

Advanced: adjustment of operating mode, opening time, etc., LED diodes indicate activated functions, support for 3 photocell lines.

Intelligent: during programming, the actuators automatically remember the end position of the gate (auto-programming).
